

ARBs and the Science capabilities at Level 1 and 2

ARBs and the Science capabilities at Level 1 and 2

Lorraine Spiller, 2018

The science capabilities are weaving tools that help teachers put the Nature of Science into the science curriculum. There are 5 science capabilities, e.g., Gather and interpret data, Use evidence, Critique evidence, Interpret representations and Engaging in science. New ARB science resources show ways to use them for weaving Nature of Science into the science curriculum. The table below shows how the science capabilities are related to the four Nature of Science substrands.

Nature of Science sub strands	Understanding about science <i>When the focus is on scientists work</i>			Investigating in science <i>When the focus is on student investigations</i>			Communicating in science <i>Make meaning of scientific representations</i>	Participating and contributing <i>Is about taking action</i>
Matching science capabilities	Gather and Interpret data	Use evidence	Critique evidence	Gather and interpret data	Use evidence	Critique evidence	Interpret representations	Engaging in science

The new ARB resources model student questions that focus on each capability e.g.,

1. **Gather and interpret data** - Is it measurable? What did you see? (observation); What might that mean? (inference), Could there be another explanation for this data? etc.
2. **Use evidence** - How do you know that? What makes you think so? How could you check that? So an example of this would be... Can you think of an example when this wouldn't work? etc.
3. **Critique evidence** - How sure are you of your results? How did you get the data? What were the possible shortcomings of this method? How could you check your findings? etc.
4. **Interpret representations** - What does this representation tell us? What is left out? How does this representation get the message across? Why is it presented in this particular way?
5. **Engaging in science** - What action will you take? What are the alternatives? etc.

Recent Science Resources at Level 1 and 2

Recent Level 1 and Level 2 science ARBs show explicitly how the assessment focus on the Nature of Science and the relevant science capabilities. For example,

Nature of Science (NOS) strand

Level Science capabilities

Resources

What you can really see
A mystery photo
River in flood

Investigating in science

students are doing the investigating.

1
and 2

Gather and interpret data

Students are asked:

- What do you notice?
- What pattern do you notice?

Rubbish on the beach
Whose nest is this?
Moths and butterflies
Seed patterns
The monarch: chrysalis to butterfly
What makes you think that?
Amongst the sand dunes
Roads
The drain
A lamb on the farm
Dogs at the beach
Driving on the beach
Cattle

Investigating in science

students are doing the investigating.

1
and 2

Using evidence

Students are asked:

- Why do you think that?
- What is it? - to identify a moth or butterfly from the evidence

River in flood
A mystery photo
Whose nest is this?
Moths and butterflies
Seed patterns
What makes you think that?

Communicating in science

students are making meaning from scientific representations.

1
and 2

Interpret representations

Students are asked to interpret meaning from representations, e.g., graphs, evidence.

Which graph matches the picture?

Participating and contributing

students are recognising an action and making

1
and 2

Engaging with science

Students are asked:

- What problems can you see? Which is the worst problem?

Roads
Amongst the sand dunes
Driving on the beach
Cattle
Dogs at the beach
The drain
A lamb on the farm

a judgement.

the water problem

A mystery photo
Rubbish on the
beach

Note: Resources often include most of the science capabilities but the assessment is specifically focussing on just one or two.
