

Frog length

This task is about reading information from a stem-and-leaf graph.

Jake very gently collected some frogs from a pond.

Jake carefully measured how long the frogs were and then let them go. He put his results on to this stem-and-leaf graph.

Tens are on the left hand side and *ones* on the right hand side of the stem graph.

Lengths of frogs (in millimetres)

How long was ...

- a) i) the smallest frog? millimetres
- ii) the longest frog? millimetres

b) How many frogs did Jake measure?
