

Creating scales II

This task is about creating a scale for a questionnaire.

Practical Task

The school wants to find out how much students enjoy different subjects.

a) Choose a school subject. Write a question and provide a scale that could be used to collect data on how much students enjoy that subject.

i) Question:

ii) Complete this scale by writing appropriate descriptions of how much students like the subject you chose, so that it could be used to record the answers to your question.

Scale:

Get your teacher to check your question and scale.

b) i) Use your scale to collect data on at least 6 of your classmates as follows:

1. Copy your question onto the lower half of the Data Form.
2. Complete the scale on both halves of the Data Form.
3. Use the Data Form to collect and record the students responses.

ii) Describe how your sample of students like the subject you choose.

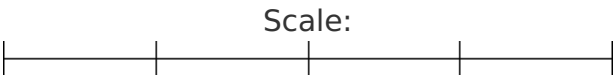

Data Form

Use this half to record student responses. ***Keep this part hidden from other students.***

- . Get students to read the question.
- . Show the scale on the other half of this page to students and ask them to point to where on the scale would best describe their response.
- . Record where they point to on the scale on this half of this page.
- . Repeat 1. to 3. with at least 6 people.

Show this half to your classmates:

Question:

----- **Fold along this line** -----
