

School rubbish II

This task is about how to group number data for a frequency table.

Mr Johnson's class was doing a unit on pollution. The class recorded the number of pieces of rubbish left on the field each day for 40 days.

3 12 6 14 7 5 15 23
7 11 16 3 4 33 2 26
1 7 14 22 6 10 0 2
8 5 11 13 21 38 32 12
3 6 7 24 27 0 9 29

Decide how to **group the data** above to sensibly display it in a tally and frequency table.

Complete the Number column of the table only.

Number of pieces of rubbish left on the field		
Number of pieces of rubbish	Tally	Frequency
