

Number line addition and subtraction II

This task is about using a number line to solve addition and subtraction problems.

For the questions below show how to solve the equations on the number line. Read through the example in the box before you start.

Example:

Sarah had to solve this problem: $96 - \square = 64$.

She knew that $96 - 30 = 66$, and that $66 - 2 = 64$.

So she showed this on the number line and then wrote the answer in the box:

$$96 - \boxed{32} = 64$$

Use the number lines below to show how to solve the equations.

a) $128 + \square = 519$

b) $345 + \square = 603$

c) $530 - \square = 327$

d) $906 - \square = 625$
