Number line subtraction II

This task is about showing how to solve subtraction equations on a number line.

For the questions below show how to solve the equations on the number line.

Read through the example in the box before you start.

> **Example:** Sarah had to solve this problem: 96 – ☐ = 64.
> She knew that 96 – 30 = 66, and that 66 – 2 = 64.
> So she showed this on the number line and then wrote the answer in the box:
>
>
>
> 96 – 32 = 64
>
> -30
>
> -2
>
> 64   66   96

a) Use the number line below to show how to solve the equation: 129 – ☐ = 86

89   129

b)

Use the number line below to show how to solve the equation: 570 – ☐ = 137

137   570

c) Use the number line below to show how to solve the equation: 786 – ☐ = 428

428   786

d) Use the number line below to show how to solve the equation: 816 – ☐ = 229

229   816
