

# Stacking wood

This task is about working out how many logs were stacked and how much people got paid.

When the wood had to be stacked for winter Mr Wary gave his children 10c for every 20 logs they stacked. There were 485 logs.

a) Finish the table to show how many logs each child stacked.

| Name  | Earnings | Logs stacked              |
|-------|----------|---------------------------|
| Ian   | 40c      | i) <input type="text"/>   |
| Donna | 60c      | ii) <input type="text"/>  |
| Jack  | 50c      | iii) <input type="text"/> |
| Roy   | 50c      | iv) <input type="text"/>  |
| Jess  | 40c      | v) <input type="text"/>   |

b) How many logs were not stacked?  logs
