

Buying books II

This task is about working out how much different numbers of books cost.

The four books Ian bought at the book sale cost \$5.40, \$3.95, \$7.85, and \$6.90.

a) How much did he pay altogether?

\$

b) How much would the most expensive book and the cheapest book cost together?

\$

c) What is the largest number of books Ian could buy for \$10?
