

Working with standard form II

This task is about calculating numbers in standard form.

Fill in the boxes for each of these calculations below in **standard form**.

E.g., The number 3.1×10^2 is written in the boxes as: $\times 10^{\text{$ kilometres.

Light travels approximately 3×10^5 kilometres in **one** second.

a) How far does light travel in ...

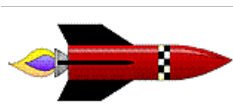

i) 3 seconds? $\times 10^{\text{$ kilometres

ii) 7 seconds? $\times 10^{\text{$ kilometres

iii) 1000 seconds? $\times 10^{\text{$ kilometres

iv) 3.2×10^7 seconds? $\times 10^{\text{$ kilometres
(approx. 1 year)

Optional working space

A space ship travels 4.5×10^3 kilometres in **one** hour.

b) How far will it travel in ...

i) 100 hours? $\times 10^{\text{$ kilometres

ii) 2.4×10^1 hours? $\times 10^{\text{$ kilometres
(i.e., 1 day)

iii) 1.67×10^{-2} hours? $\times 10^{\text{$ kilometres
(approx. 1 minute)

Optional working space
