

Fractions and triangles

This task is about working out the fraction of shapes that is shaded.

a) What fraction of the triangles above is shaded?

<input type="radio"/> $\frac{1}{2}$	<input type="radio"/> $\frac{1}{3}$	<input type="radio"/> $\frac{2}{6}$	<input type="radio"/> $\frac{1}{4}$
-------------------------------------	-------------------------------------	-------------------------------------	-------------------------------------

b) **One** more triangle was shaded. What fraction is shaded now?

<input type="radio"/> $\frac{3}{8}$	<input type="radio"/> $\frac{3}{4}$	<input type="radio"/> $\frac{3}{6}$	<input type="radio"/> $\frac{3}{3}$
-------------------------------------	-------------------------------------	-------------------------------------	-------------------------------------

c) Another triangle was shaded. What fraction is **unshaded** now?

<input type="radio"/> $\frac{1}{8}$	<input type="radio"/> $\frac{1}{3}$	<input type="radio"/> $\frac{1}{4}$	<input type="radio"/> $\frac{1}{2}$
-------------------------------------	-------------------------------------	-------------------------------------	-------------------------------------
