

Estimating time

This task is about estimating the duration of time.

You are going to be working with a partner and both of you will be taking turns to estimate how much time you think has gone by.

- 1. Take turns using a stopwatch to estimate when you think 15 seconds, 30 seconds, 45 seconds, and 60 seconds have gone by.
- 2. Each time one of you has the stopwatch and says "Go" while the other says "Stop" when they think the correct number of seconds has gone by.
- 3. Reset the stopwatch to 0 after each estimation.

Record both your estimates and your partner's estimates on the table below.

	Time	Your Estimate	Your Partner's Estimate
a)	15 seconds	<input type="text"/> seconds	<input type="text"/> seconds
b)	30 seconds	<input type="text"/> seconds	<input type="text"/> seconds
c)	45 seconds	<input type="text"/> seconds	<input type="text"/> seconds
d)	60 seconds	<input type="text"/> seconds	<input type="text"/> seconds
