

# Predicting capacity

This task is about capacity of containers.

a) About how many jars of water will be needed to fill container A? *(Choose one)*

<input type="radio"/> 1 jar	<input type="radio"/> 2 jars
<input type="radio"/> 4 jars	<input type="radio"/> 5 jars

b) About how many jars of water will be needed to fill container B? *(Choose one)*

<input type="radio"/> 3 jars	<input type="radio"/> 6 jars
<input type="radio"/> 12 jars	<input type="radio"/> 15 jars

Go to the sink and use the jar to see how many jars of water it will take to fill container A.  
c) Do the same with container B. *Write your answers in the table below.*

Object	I used
Container A	<input type="text"/> jars
Container B	<input type="text"/> jars

Use the litre measuring jug to see how many litres of water it will take to fill container A.  
d) Do the same with container B. *Write your answers in the table below.*

Object	I measured
Container A	<input type="text"/> litres
Container B	<input type="text"/> litres
