

# Using orange juice

---

This task is about working out capacities.

## Useful Information:

1 litre (l) = 1000 millilitres (ml)

This bottle holds 2.5 litres of juice when it is full.

a) How many millilitres are in a full bottle?  ml

b) The full bottle tipped over and 500 ml of juice was spilt.

How many litres would be left?  litres

c) Jane needed 500 ml of juice for each bowl of punch she was making.

How many bowls of punch could she make from one full bottle of juice?

d) If you poured 20 glasses of juice from a full bottle, there would be no juice left.

How many millilitres does each glass hold?  ml
