

Changing temperatures II

This task is about reading temperature scales on thermometers.

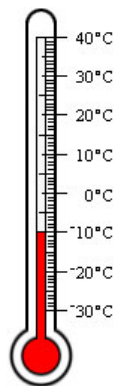

a) What would this thermometer show if the temperature was 5°C colder? $^{\circ}\text{C}$

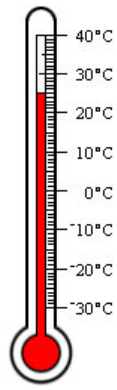

b) This thermometer shows -5°C .

What will it read if the temperature rises by 30°C ? $^{\circ}\text{C}$

c) What would this thermometer show if the temperature increased by 17°C ? $^{\circ}\text{C}$

d) This thermometer shows 25°C above zero.

If the temperature drops 27°C, what will it read then? °C
