

Working with Pythagoras

This task is about using Pythagoras' theorem to decide whether triangles are right-angled.

Pythagoras' Theorem:

$$a^2 + b^2 = c^2$$

Select *Yes* if the triangles listed below are right-angled triangles.
Select *No* if they are not right-angled triangles.

	Length of the triangle's sides			Is it right-angled?
a)	2	3	4	<i>Yes/ No</i>
b)	5	7	12	<i>Yes/ No</i>
c)	8	15	17	<i>Yes/ No</i>
d)	9	18	27	<i>Yes/ No</i>
e)	12	16	20	<i>Yes/ No</i>
f)	30	40	50	<i>Yes/ No</i>
