

Making a triangular prism

This task is about making different nets for a triangular prism.

Practical Task

This is a drawing of a **triangular prism**.

Use the shapes you are given to make **three** different **net patterns** for this prism.

- Make the first net pattern with three rectangles touching.
- Make the second net pattern with only two rectangles touching.
- Make the third net pattern with no rectangles touching.

Cut out one set of shapes at a time and use sellotape to stick the shapes together so each net pattern is in one piece.

You may want to fold your net pattern into a prism to test it but do not stick it together, leave it as a flat net pattern.

Shapes for the net patterns
