## Tennis ball equations

This task is about writing and solving number sentences.

Write the missing number in the box to make the equation correct.
a)

$$
3 \times \square+2=14
$$

Tennis balls come in cylinders holding 3 balls. Janet has 14 balls.
b)Use the equation in a) to answer these questions.
i)

How many cylinders could she completely fill with these balls?
ii) How many balls would be left over? $\qquad$
Here is a similar problem:
${ }^{\text {c) }}$ Mikaere has $\mathbf{2 8}$ tennis balls altogether. A full cylinder contains $\mathbf{3}$ balls.
How many cylinders could he completely fill? $\qquad$
i) Write an equation similar to the one above that could be used to find out how many balls John would have left over.
ii)Use a box to represent the number of balls left over.
