

Insulated house

Sara wanted to find out how well house insulation works. She made models of two houses – one that was insulated, and one that was not insulated. She used a cardboard box as a house and a sealed container of hot water as a heater.

This diagram shows a cross section of Sara's insulated house.

a)How would the walls be different in Sara's non-insulated house?

b)To make her investigation a "fair test", what are three things Sara would need to keep the same?

i)

ii)

iii)

c)Why do people use house insulation?
