

How we hear

This task is about how sound travels to the brain.

The statements below, which describe how sounds are heard, are out of order. Put the statements in order. The first and the last boxes have been done for you.

Noise comes from a vibrating object.

Ear bones vibrate.

Ear nerves take to sound messages to the brain.

Air particles carry vibrations.

Vibrations cause our ear drum to vibrate.

Vibrations pass on to air particles.

The brain tells us what we hear.
