

Electricity: Keeping safe

This task is about conducting electricity and safety.

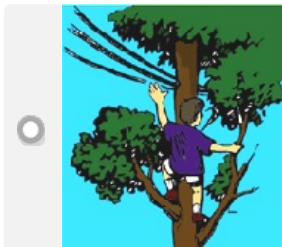

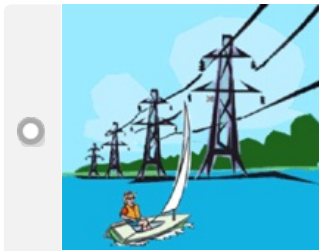

line carrying 11,000 volts

a) How is it that a bird can perch on a high-voltage power line without being electrocuted?
Select the answer below you think is right

- "Birds' claws don't conduct electricity."
- Ani
- "Only humans get electrocuted."
- Cam
- "It is easier for the electricity to travel along the wire than through the bird."
- Ihipera

b) Select the pictures where there is a danger of being electrocuted.

c) Explain how the electricity will travel in one of the pictures you chose.
