

Mountain bike race

This task is about making inferences from a photograph.

Two girls were racing down a hill on identical mountain bikes. The rules were that you could not pedal and the race began from a standing start. Paula was ahead of Aroha as they raced to the bottom of the hill.

Look carefully at the photo.

a) What do you notice that might be making Paula go fast?

The bikes will eventually slow down and stop.

b) What makes them do this?
