What type of energy?

This task is about different types of energy.

Classify each of the following examples of energies below as either:

- potential energy (stored energy)
- kinetic energy (object movement)
- radiant energy (wave or particle movement)

a) Energy of a moving car.		
potential	o kinetic	O radiant
b) Energy of electrons in a current carrying wire.		
o potential	O kinetic	o radiant
c) Energy given out by a hot black	can.	
o potential	O kinetic	O radiant
d) Energy of a stretched piece of elastic.		
opotential	kinetic	radiant
e) Energy of an apple.		
o potential	O kinetic	O radiant
f) Energy of an object before it fall	s off a cliff.	
o potential	O kinetic	O radiant
g) Energy of an object during its fa	II.	
opotential	O kinetic	O radiant
