

Writing about earthquakes

This task is about earthquakes.

Many scientific terms can be used when writing about earthquakes. Some of them are in the key list below.

Key List

**crust Earth epicentre fault line focu Mercalli plate
boundary Richter s-wave seismograph seismometer p-wave**

Write a paragraph about earthquakes in the space below. The paragraph should explain

- what happens when earthquakes occur,
- where they occur,
- the difference between the focus and the epicentre,
- what are used to record earthquakes, and
- how they are measured.

Use as many words from the key list as you can. Make sure that the words are used correctly so that someone who is studying science can understand what you have written.
