## A New Zealand glacier

## This task is about the impact of temperature on glaciers.

a) What are **two** natural hazards that could cause problems when people visit a glacier?

|        |  |

| b) | Over the next 70 years New Zealand's annual temperature is expected to increase by about 1.5° | C |
|----|-----------------------------------------------------------------------------------------------|---|
|    | What effect is this likely to have on the position of the glacier snout?                      |   |
