

Rocks in our area

This task is about how and where to find information about rocks and landscapes.

You are going to study the rock types and rock formations or features in your local area for a school project.

a) What are **three** main questions you could ask about the local rock types and formations?

1.

2.

3.

b) Finish the table below to show places or people you could go to, to find out the information you need for your school project. Write down the information you might get from that source. An example has been done for you.

Where could I go, or who could I ask, to get information?	Exactly what type of information could I get from this source?
A geologist or rock scientist	Samples of rocks. Information on the different types of rock and how they were formed.
