

Cooking changes things

This task is about physical and chemical changes.

Cooking can change food and drinks.

A physical change is reversible and no new substance is made. A chemical change is not reversible and a new substance is made.

Below are some changes that can happen during cooking.
Classify each as a chemical or physical change.

- a) Breaking eggs: *chemical change* / *physical change*
- b) Hard boiling an egg: *chemical change* / *physical change*
- c) Melting butter: *chemical change* / *physical change*
- d) Stirring milk into hot coffee: *chemical change* / *physical change*
- e) Baking biscuits: *chemical change* / *physical change*
