

# Soaking up water

---

This task is about setting up an investigation.

A class is testing three different types of paper to see which soaks up water best. They are testing:

- Paper towels
- Brown paper bags
- Newspaper

They dipped each type of paper into a bowl of water with green dye in it to see how far the water and dye went up the paper.

What are **two** things that need to be kept the same to make sure the test is fair?

1.

2.
