

# Three ways to separate mixtures

---

With a large sieve

With a magnet

By evaporation

A teacher mixed different things together. Choose the best way to separate each mixture from the list above. The first one is done for you.

## Mixture

## Best way to separate the mixture

- |   |                     |
|---|---------------------|
| a) Rocks and soil.                            | With a large sieve. |
| b) Sugar and water.                           |                     |
| c) Flour and peanuts.                         |                     |
| d) Metal paper clips and plastic paper clips. |                     |
| e) Salt and water.                            |                     |
| f) Metal needles and sawdust.                 |                     |
