

# Match to the definition

This task is about matching chemical terms to their definitions.

Chemical substances can be classified as elements, compound, or mixtures.  
Select the correct definition for each term.

a) Select the correct definition for the term 'element'.

- contains only 1 atom
- contains 2 or more types of atoms but they are not strongly bonded together
- contains 2 or more types of atoms bonded together
- contains only 1 type of atom

b) Select the correct definition for the term 'compound'.

- contains only 1 atom
- contains 2 or more types of atoms but they are not strongly bonded together
- contains 2 or more types of atoms bonded together
- contains only 1 type of atom

c) Select the correct definition for the term 'mixture'.

- contains only 1 atom
- contains 2 or more types of atoms but they are not strongly bonded together
- contains 2 or more types of atoms bonded together
- contains only 1 type of atom
