

# A flax bush ecosystem

This task is about relationships between living and non-living things in a flax bush.

a) A drawing of a flax bush has been started for you.

What other living and non living things might you find on and around a flax bush?

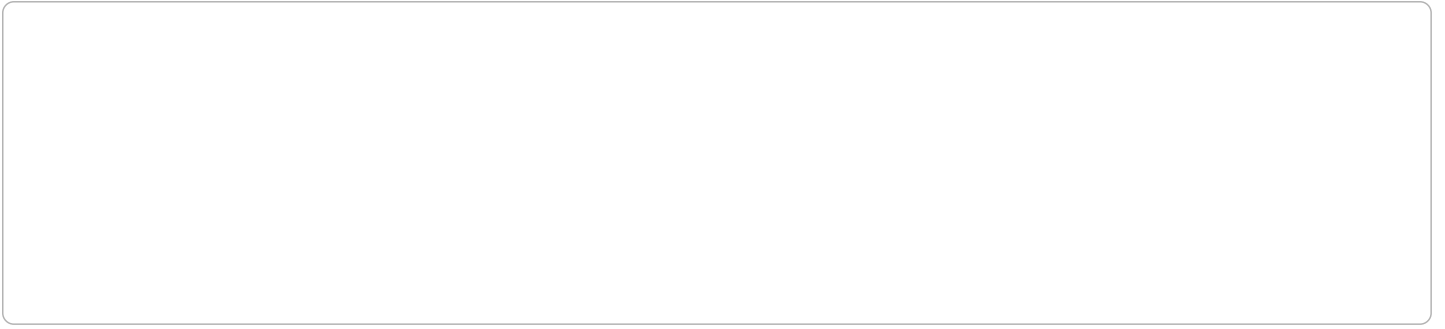

Draw and label as many ideas as you can think of to add to the drawing below.

b) A relationship is a connection between 2 things. An example of a relationship in the picture could be:  
The tui drinks nectar from the flower.

From your picture describe a relationship between **two** things that are on or near the flax bush.

c) Describe some ways in which human activity can change relationships on a flax bush.
