

A native bush ecosystem

This task is about relationships between living and non-living things in a forest.

A drawing of an area of native bush has been started for you. What other living and non living things might you find there?

a) Draw and label as many ideas as you can think of to add to the drawing below.

b) A relationship is a connection between 2 things. An example of a relationship in the picture could be:
The weta hides under the log.

From your picture describe a relationship between 2 things that are in the bush.

c) Describe some ways in which human activity can change relationships in native bush.
