

What lives in our waterways?

This task is about relationships between living and non-living things in the waterways.

A waterway could be a river, stream, or drain.

a) A drawing of a New Zealand stream has been started for you.

What other living and non living things might you find in and near this stream?

Draw and label as many ideas as you can think of to add to the drawing below.

b) A relationship is a connection between 2 things. An example of a relationship in the picture could be:
The kingfisher feeds on small fish.

From your picture describe a relationship between:

i) **two** things in the water.

ii) one thing on the bank and one thing in the water.

c) Describe some ways in which human activity can upset relationships in and around this waterway.
