

# My cat Sooty

---

**This task is about food chains.**

My cat Sooty likes to eat small birds like sparrows. This is a pity because these birds eat the caterpillars, snails, and slugs that feed on our lettuces.

One day Sooty was watching a kingfisher looking at the goldfish feeding on the weed in the garden pond. Sooty likes eating goldfish too, but the kingfisher was faster than she was. She missed out on the goldfish, but nearly got the kingfisher! It would have been a good tasty meal. Sooty likes to eat grass too. It cures her indigestion!

Use the information in the story to draw a food chain that includes the cat.
