

Functions of plant parts

Draw a line from the plant function, to the part of the plant that performs the function.
One part is not needed.

Plant function	Part of plant
Take water into the plant	Leaves
Main area for making food	Stems
Attract insects so that seed forming occurs	Berries
Support the leaves	Roots
Help the plant to hang on and climb	Tendrils
Take in gases for respiration and photosynthesis	Leaves
	Flowers
