

Spreading seeds 1

Seeds need to be spread away from their parent plant so that they get plenty of light, space, and water to grow. Many seeds have special features to help make sure they are carried away.

Complete this table. Fill in the seed name, and then explain why the seed is able to spread in this way. The first one has been done for you.

Method of spread	Seed name	Explain why the seed is able to be spread in this way
On animals' coats	Hookgrass	Because hookgrass seeds have hooks that hang on to animals.
a) By wind		
b) By water		
c) Eaten by animals
