

Design a plant

Here are some notes on a plant:

- It lives in hot dry places.
 - Strong winds sometimes blow in this area.
 - Animals like to eat it if they can.
 - It needs birds to take pollen from one flower to another.
- . In the box draw a picture of a plant that would look like the one you have just read about and that could survive in these conditions. The ground level has been drawn in for you.
- . Label all the special features of the plant and explain how they help it survive.
