

Meat-eating and plant-eating dinosaurs

This task is about using evidence to make inferences about dinosaurs.

- a) Use the images and the features in the table to help you decide whether the dinosaur was a meat- or plant-eater, and why you think that.

Features meat-eating dinosaurs (carnivores) may have	Features plant-eating dinosaurs (herbivores) may have
Teeth - many sharp teeth for ripping and chewing	Teeth - flat teeth for slicing and grinding
Legs and feet - long feet with pointed claws - a large sharp claw on back feet - able to move on two legs - long slim legs for running	Legs and feet - flat feet - most move on four legs, some on two - big legs
Eyes - eyes face to the front	Eyes - eyes are at the side of the head
Stomach - slim stomach	Stomach - big round stomach
	Other features - armour, bony plates, spikes, horns and/or clubbed tails - long necks

We think this is a ... (Choose one)

Meat-eater

Plant-eater

We can see ...

Velociraptor

We think this is a ... (Choose one)

Meat-eater

Plant-eater
