

Body temperatures

This task is about reading information off a graph.

Environmental temperature and body temperature of 4 animals

- a) From the graph determine:

i) the length of time does the graph cover? hours

ii) the highest temperature reached in this place. °C

iii) the lowest temperature reached in this place. °C

iv) the range of temperature fluctuations shown in this place. °C
- b) What would you expect the weather to be like in the place where these temperatures were taken?
- c) i) Which graph line would represent the body temperature of a human during this time? (choose one)

☐ Animal A

☐ Animal B

☐ Animal C

☐ Animal D

- ii) Why did you choose this answer?

d) i) Which graph line would represent the body temperature of a spider during this time? (*choose one*)

☐ Animal A ☐ Animal B ☐ Animal C ☐ Animal D

ii) Why did you choose this answer?

e) i) Choose one graph line that follows a pattern that wouldn't be possible. (*choose one*)

☐ Animal A ☐ Animal B ☐ Animal C ☐ Animal D

ii) Explain why you chose this pattern.
